“Modelēšanas instrumenti oglekļa aprites un siltumnīcefekta gāzu emisiju novērtēšanai serdes trupes bojātās lapu koku audzēs”

(Nr. 1.1.1.1/21/A/063)

Projekta rezultāti prezentēti starptautiskā konferencē

Prezentācija veikta starptautisko zinātniskā konferencē “Sustainable Bioeconomy Development 2022: Theory and Practice” (International Scientific Conference “Sustainable Bioeconomy Development 2022: Theory and Practice” held online on 04-05 May 2022 (<https://sbd.vdu.lt/conference/>)). The conference is organised by the Faculty of Bioeconomy Development of Vytautas Magnus University Agriculture Academy and the Faculty of Economics and Social Development of Latvia University of Life Sciences and Technologies.)

Izmantojot paraugkoku datus, raksturota trupes kolonna stumbra iekšienē un tās ietekme uz koksnes blīvumu – tārad kopējo sumbra oglekļa saturu. Ņemot vērā projekta darbs stadiju, prezentētie rezultāti ir sākotnēji un tiks precizēti, papildinot paraugkopu, tomēr saglabājot tādu pat lauka un kamerālo darbu metodiku.

thank you for nice
presentation

my question is why biomass is
so criticized for climate
changing?
